Primary User Service Technicians	**Impacted Contacts** Downstream clients	**Associated Documents** Former STN-000434	**Author** David Lloyd

Picture 1

1. sACN data comes out of output 1 on the console. Because of this the Octo needs to be set in the range of 192.168.0.xxx
2. ***Network DMX if alone*** is outlined in red in picture 1 needs to be on.
3. ***sACN output active*** needs to be on as outlined in orange in picture 1.
4. Local start is the universe you want to start outputting to the device.
5. Amount is the number of universes on the device…in the Pathport Octo that would be 8.
6. You need to create a session on the console to get the device to come on-line. It will take a few seconds.
